Package 'NGLVieweR'

October 12, 2022

Title Interactive 3D Visualization of Molecular Structures

Version 1.3.1

Maintainer Niels van der Velden <n.s.j.vandervelden@gmail.com>

Description Provides an 'htmlwidgets' <https://www.htmlwidgets.org/> interface to 'NGL.js' <http://nglviewer.org/ngl/api/>. 'NGLvieweR' can be used to visualize and interact with protein databank ('PDB') and structural files in R and Shiny applications.
It includes a set of API functions to manipulate the viewer after creation in Shiny.

R topics documented:

`addRepresentation` *Add representation*

Description

Add a representation and its parameters.

Usage

```
addRepresentation(NGLVieweR, type, param = list())
```

Arguments

`NGLVieweR`	A NGLVieweR object.
`type`	Type of representation. Most common options are "cartoon", "ball+stick", "line", "surface", "ribbon" and "label". For a full list of options, see the "structureRepresentation" method in the official NGL.js manual.
`param`	Options for the different types of representations. Most common options are `name`, `opacity`, `colorScheme`, `sele`, `colorValue` and `visibility`. For a full list of options, see the general "RepresentationParameters" method and type specific Label-, Structure- and Surface- RepresentationParameters in the official NGL.js manual.

Value

List of representation parameters to `NGLVieweR` `htmlwidgets` object.

See Also

- addSelection()
- NGLVieweR_example() See example "basic".

Examples

```
NGLVieweR("7CID") %>%
  stageParameters(backgroundColor = "black") %>%
  addRepresentation("cartoon", param = list(name = "cartoon", colorValue = "blue")) %>%
  addRepresentation("ball+stick", param = list(
    name = "ball+stick", sele = "241",
    colorScheme = "element", colorValue = "yellow"
  )) %>%
  addRepresentation("label",
    param = list(
      name = "label",
      showBackground = TRUE,
      labelType = "res",
      color = "black",
      backgroundColor = "white",
      backgroundOpacity = 0.8,
      sele = ":A and 241 and .CG"
    )
  )

# Shiny context
if (interactive()) {
  library(shiny)
  ui <- fluidPage(NGLVieweROutput("structure"))
  server <- function(input, output) {
    output$structure <- renderNGLVieweR({
      NGLVieweR("7CID") %>%
        stageParameters(backgroundColor = "black") %>%
        addRepresentation("cartoon",
          param = list(name = "cartoon", colorValue = "blue")
        ) %>%
        addRepresentation("ball+stick",
          param = list(
            name = "ball+stick", sele = "241",
            colorScheme = "element"
          )
        ) %>%
        addRepresentation("label",
          param = list(
            name = "label",
            showBackground = TRUE,
            labelType = "res",
            colorValue = "black",
            backgroundColor = "white",
            backgroundOpacity = 0.8,
            sele = ":A and 241 and .CG"
          )
```

```
        )
    })
  }
  shinyApp(ui, server)
}
```

`addSelection` *Add a selection*

Description

Add a new selection to a NGLVieweR object in Shinymode.

Usage

```
addSelection(NGLVieweR_proxy, type, param = list())
```

Arguments

`NGLVieweR_proxy`	A NGLVieweR object.
`type`	Type of representation. Most common options are "cartoon", "ball+stick", "surface", "ribbon" and "label".
`param`	Options for the different types of representations. Most common options are `name`, `opacity`, `colorScheme`, `sele`, `colorValue` and `visibility`. For a full list of options, see the general "RepresentationParameters" method and type specific Label-, Structure- and Surface- RepresentationParameters in the official NGL.js manual.

Value

API call containing `NGLVieweR` `id` and list of message parameters.

See Also

- `updateRepresentation()` Update an existing NGLVieweR representation.
- `NGLVieweR_example()` See example "addSelection".

Other selections: `removeSelection()`, `updateSelection()`

Examples

```
## Not run:
NGLVieweR_proxy("7CID") %>%
 addSelection("ball+stick", param = list(name="sel1",
                                         sele="1-20",
                                         colorValue="yellow",
                                         colorScheme="element"
                                         ))
```

```
## End(Not run)

if (interactive()) {
library(shiny)

ui <- fluidPage(
  titlePanel("Viewer with API inputs"),
  sidebarLayout(
    sidebarPanel(
      textInput("selection", "Selection", "1-20"),
      selectInput("type", "Type", c("ball+stick", "cartoon", "backbone")),
      selectInput("color", "Color", c("orange", "grey", "white")),
      actionButton("add", "Add"),
      actionButton("remove", "Remove")
    ),
    mainPanel(
      NGLVieweROutput("structure")
    )
  )
)
server <- function(input, output) {
  output$structure <- renderNGLVieweR({
    NGLVieweR("7CID") %>%
      addRepresentation("cartoon",
        param = list(name = "cartoon", colorScheme = "residueindex")
      )
  })
  observeEvent(input$add, {
    NGLVieweR_proxy("structure") %>%
      addSelection(isolate(input$type),
        param =
          list(
            name = "sel1",
            sele = isolate(input$selection),
            colorValue = isolate(input$color)
          )
      )
  })

  observeEvent(input$remove, {
    NGLVieweR_proxy("structure") %>%
      removeSelection("sel1")
  })
}
shinyApp(ui, server)
}
```

NGLVieweR *Create a NGLVieweR*

Description

NGLVieweR can be used to visualize and interact with Protein Data Bank (PDB) and structural files in R and Shiny applications. It includes a set of API functions to manipulate the viewer after creation in Shiny.

Usage

```
NGLVieweR(data, format = NULL, width = NULL, height = NULL, elementId = NULL)
```

Arguments

`data`	PDB file or PDB entry code
`format`	Input format (.mmcif, .cif, .mcif, .pdb, .ent, .pqr, .gro, .sdf, .sd, .mol2, .mmtf). Needed when no file extension is provided.
`width, height`	Must be a valid CSS unit (like `'100%'`, `'400px'`, `'auto'`) or a number, which will be coerced to a string and have `'px'` appended.
`elementId`	optional element Id

Details

The package is based on the NGL.js JavaScript library. To see the full set of features please read the official manual of NGL.js.

Value

A `NGLVieweR` `htmlwidgets` object.

See Also

- `NGLVieweR_proxy()` for handling of API calls after rendering.
- `NGLVieweR_example()` See example "API" and "basic".

Examples

```
# Example 1: Most Basic
NGLVieweR("7CID") %>%
 addRepresentation("cartoon", param = list(name = "cartoon", colorScheme="residueindex"))

# Example 2: Advanced
NGLVieweR("7CID") %>%
  stageParameters(backgroundColor = "white") %>%
  setQuality("high") %>%
  setSpin(FALSE) %>%
  addRepresentation("cartoon",
    param = list(
      name = "cartoon",
      colorScheme = "residueindex"
    )
```

```
  ) %>%
  addRepresentation("ball+stick",
    param = list(
      name = "ball+stick",
      colorValue = "red",
      colorScheme = "element",
      sele = "200"
    )
  ) %>%
  addRepresentation("label",
    param = list(
      name = "label", sele = "200:A.O",
      showBackground = TRUE,
      backgroundColor = "black",
      backgroundMargin = 2,
      backgroundOpacity = 0.5,
      showBorder = TRUE,
      colorValue = "white"
    )
  ) %>%
  addRepresentation("surface",
    param = list(
      name = "surface",
      colorValue = "white",
      opacity = 0.1
    )
  ) %>%
  zoomMove("200", "200", 2000, -20)

#---------------------Using Shiny-------------------------

# App 1: Basic Example
if (interactive()) {
  library(shiny)
  ui <- fluidPage(NGLVieweROutput("structure"))
  server <- function(input, output) {

  })
```

```
}
shinyApp(ui, server)
}
```

NGLVieweR-shiny *Shiny bindings for NGLVieweR*

Description

Output and render functions for using NGLVieweR within Shiny applications and interactive Rmd documents.

Usage

```
NGLVieweROutput(outputId, width = "100%", height = "400px")

renderNGLVieweR(expr, env = parent.frame(), quoted = FALSE)

NGLVieweR_proxy(id, session = shiny::getDefaultReactiveDomain())
```

Arguments

outputId	output variable to read from
width, height	Must be a valid CSS unit (like '100%', '400px', 'auto') or a number, which will be coerced to a string and have 'px' appended.
expr	An expression that generates a NGLVieweR.
env	The environment in which to evaluate expr.
quoted	Is expr a quoted expression (with quote())? This is useful if you want to save an expression in a variable.
id	single-element character vector indicating the output ID of the chart to modify (if invoked from a Shiny module, the namespace will be added automatically)
session	The Shiny session object to which the map belongs; usually the default value will suffice.

Value

NGLVieweR object that can be placed in the UI.

See Also

NGLVieweR_example()

Examples

```
if (interactive()) {
library(shiny)

ui <- fluidPage(
  titlePanel("Viewer with API inputs"),
  sidebarLayout(
    sidebarPanel(
      textInput("selection", "Selection", "1-20"),
      selectInput("type", "Type", c("ball+stick", "cartoon", "backbone")),
      selectInput("color", "Color", c("orange", "grey", "white")),
      actionButton("add", "Add"),
      actionButton("remove", "Remove")
    ),
    mainPanel(
      NGLVieweROutput("structure")
    )
  )
)
server <- function(input, output) {
  output$structure <- renderNGLVieweR({
    NGLVieweR("7CID") %>%
      addRepresentation("cartoon",
        param = list(name = "cartoon", color = "residueindex")
      ) %>%
      stageParameters(backgroundColor = input$backgroundColor) %>%
      setQuality("high") %>%
      setFocus(0) %>%
      setSpin(TRUE)
  })
  observeEvent(input$add, {
    NGLVieweR_proxy("structure") %>%
      addSelection(isolate(input$type),
        param =
          list(
            name = "sel1",
            sele = isolate(input$selection),
            color = isolate(input$color)
          )
      )
  })

  observeEvent(input$remove, {
    NGLVieweR_proxy("structure") %>%
      removeSelection("sel1")
  })
}
shinyApp(ui, server)
}
```

NGLVieweR_example *Run NGLVieweR example Shiny app*

Description

Launch an example to demonstrate how to use NGLvieweR in Shiny.

Usage

```
NGLVieweR_example(example = "basic")
```

Arguments

example	Example type for which to see an example, possible values are: "basic", "API", "addSelection", "removeSelection", "snapshot", "updateAnimation", "updateColor", "updateFocus", "updateFullscreen", "updateRepresentation", "updateSelection", "updateStage", "updateVisibility" and "updateZoomMove".

Value

Call to load Shiny example.

Examples

```
if (interactive()) {

# Basic example
NGLVieweR_example("basic")

# Example with API calls
NGLVieweR_example("API")

# Function specific example
NGLVieweR_example("addSelection")
}
```

removeSelection *Remove a selection*

Description

Remove an existing NGLVieweR selection in Shinymode.

Usage

```
removeSelection(NGLVieweR_proxy, name)
```

Arguments

NGLVieweR_proxy	A NGLVieweR object.
name	Name of selection to be removed.

Value

API call containing NGLVieweR id and list of message parameters.

See Also

- NGLVieweR_example() See example "removeSelection".

Other selections: addSelection(), updateSelection()

Examples

```
## Not run:
NGLVieweR_proxy("structure") %>%
     removeSelection("sel1")

## End(Not run)

if (interactive()) {
  library(shiny)

  ui <- fluidPage(
    titlePanel("Viewer with API inputs"),
    sidebarLayout(
      sidebarPanel(
        textInput("selection", "Selection", "1-20"),
        selectInput("type", "Type", c("ball+stick", "cartoon", "backbone")),
        selectInput("color", "Color", c("orange", "grey", "white")),
        actionButton("add", "Add"),
        actionButton("remove", "Remove")
      ),
      mainPanel(
        NGLVieweROutput("structure")
      )
    )
  )
  server <- function(input, output) {
    output$structure <- renderNGLVieweR({
      NGLVieweR("7CID") %>%
        addRepresentation("cartoon",
          param = list(name = "cartoon", colorScheme = "residueindex")
        )
    })
    observeEvent(input$add, {
      NGLVieweR_proxy("structure") %>%
        addSelection(isolate(input$type),
          param =
```

```
            list(
              name = "sel1",
              sele = isolate(input$selection),
              colorValue = isolate(input$color)
            )
        )
    })

    observeEvent(input$remove, {
      NGLVieweR_proxy("structure") %>%
        removeSelection("sel1")
    })
  }
  shinyApp(ui, server)
}
```

`setFocus` *Set Focus*

Description

Set Focus

Usage

```
setFocus(NGLVieweR, focus = 0)
```

Arguments

`NGLVieweR`	A NGLVieweR object.
`focus`	Set focus between 0 (default) to 100.

Value

setFocus parameter in `NGLVieweR` `htmlwidgets` object.

See Also

`updateFocus()`

Other options: `setQuality()`, `snapShot()`, `updateFocus()`, `updateFullscreen()`

Examples

```
NGLVieweR("7CID") %>%
  addRepresentation("cartoon", param=list(name="cartoon", colorValue="blue")) %>%
  setFocus(0)
```

setQuality *Set Quality*

Description

Set Quality

Usage

```
setQuality(NGLVieweR, quality = "medium")
```

Arguments

NGLVieweR	A NGLVieweR object.
quality	Set rendering quality. Can be "low", "medium" (default) or "high".

Value

setQuality parameter in NGLVieweR htmlwidgets object.

See Also

Other options: setFocus(), snapShot(), updateFocus(), updateFullscreen()

Examples

```
NGLVieweR("7CID") %>%
  addRepresentation("cartoon", param=list(name="cartoon", colorValue="blue")) %>%
  setQuality("medium")
```

setRock *Set rock*

Description

Set rock animation

Usage

```
setRock(NGLVieweR, rock = TRUE)
```

Arguments

NGLVieweR	A NGLVieweR object.
rock	If TRUE (default), start rocking and stop spinning.

Value

setRock parameter to TRUE or FALSE in NGLVieweR htmlwidgets object.

See Also

- setSpin()
- updateRock()

Other animations: setSpin(), updateRock(), updateSpin(), updateZoomMove(), zoomMove()

Examples

```
NGLVieweR("7CID") %>%
 addRepresentation("cartoon", param=list(name="cartoon", colorValue="blue")) %>%
 setRock(TRUE)
```

---

setSpin *Set Spin*

Description

Set Spin animation

Usage

```
setSpin(NGLVieweR, spin = TRUE)
```

Arguments

NGLVieweR	A NGLVieweR object.
spin	If TRUE (default), start spinning and stop rocking

Value

setSpin parameter to TRUE or FALSE in NGLVieweR htmlwidgets object.

See Also

- setRock()
- updateSpin()

Other animations: setRock(), updateRock(), updateSpin(), updateZoomMove(), zoomMove()

Examples

```
NGLVieweR("7CID") %>%
 addRepresentation("cartoon", param=list(name="cartoon", colorValue="blue")) %>%
 setSpin(TRUE)
```

snapShot *Snapshot*

Description

Make a snapshot of a NGLVieweR object in Shinymode.

Usage

```
snapShot(NGLVieweR_proxy, fileName = "Snapshot", param = list())
```

Arguments

NGLVieweR_proxy	A NGLVieweR object.
fileName	Optional name for Snapshot (default = "Snapshot").
param	Of type list, can be; antialias TRUE/FALSE, trim TRUE/FALSE, transparent TRUE/FALSE or scale numeric. For a full list of options, see "makeImage" and "ImageParameters" in the official NGL.js manual.

Value

API call containing NGLVieweR id and list of message parameters.

See Also

NGLVieweR_example() See example "snapshot".

Other options: setFocus(), setQuality(), updateFocus(), updateFullscreen()

Examples

```
## Not run:
NGLVieweR_proxy("structure") %>%
snapShot("Snapshot", param = list(
                              antialias = TRUE,
                              trim = TRUE,
                              transparent = TRUE,
                              scale = 1))

## End(Not run)

if (interactive()) {
  library(shiny)

  ui <- fluidPage(
    titlePanel("Viewer with API inputs"),
    sidebarLayout(
      sidebarPanel(
```

```
      actionButton("snapshot", "Snapshot"),
    ),
    mainPanel(
      NGLVieweROutput("structure")
    )
  )
)
server <- function(input, output) {
  output$structure <- renderNGLVieweR({
    NGLVieweR("7CID") %>%
      addRepresentation("cartoon",
        param = list(
          name = "cartoon",
          color = "residueindex"
        )
      )
  })
  observeEvent(input$snapshot, {
    NGLVieweR_proxy("structure") %>%
      snapShot("Snapshot",
        param = list(
          antialias = TRUE,
          trim = TRUE,
          transparent = TRUE,
          scale = 1
        )
      )
  })
}
shinyApp(ui, server)
}
```

`stageParameters` *Set stage parameters*

Description

Set stage parameters.

Usage

```
stageParameters(NGLVieweR, ...)
```

Arguments

`NGLVieweR`	A NGLVieweR object.
`...`	Options controlling the stage. Most common options are `backgroundColor`, `rotateSpeed`, `zoomSpeed`, `hoverTimeout` and `lightIntensity`. For a full list of options, see the "stageParameters" method in the official NGL.js manual.

Value

Returns list of stage parameters to NGLVieweR htmlwidgets object.

See Also

- updateStage()
- NGLVieweR_example() See example "basic".

Examples

```
NGLVieweR("7CID") %>%
 stageParameters(backgroundColor = "white", zoomSpeed = 1) %>%
 addRepresentation("cartoon", param = list(name = "cartoon", colorScheme="residueindex"))

if (interactive()) {
  library(shiny)
  ui <- fluidPage(NGLVieweROutput("structure"))
  server <- function(input, output) {
    output$structure <- renderNGLVieweR({
      NGLVieweR("7CID") %>%
        stageParameters(backgroundColor = "white", zoomSpeed = 1) %>%
        addRepresentation("cartoon",
          param = list(name = "cartoon", colorScheme = "residueindex")
        )
    })
  }
  shinyApp(ui, server)
}
```

---

updateColor *Update color of a selection*

Description

Update color of an existing NGLVieweR selection in Shinymode.

Usage

```
updateColor(NGLVieweR_proxy, name, color)
```

Arguments

NGLVieweR_proxy	A NGLVieweR object.
name	Name of selection to alter the color.
color	Can be a colorValue (color name or HEX code) or colorScheme (e.g. "element", "resname", "random" or "residueindex"). For a full list of options, see the "Colormaker" section in the official NGL.js manual.

Value

API call containing NGLVieweR id and list of message parameters.

See Also

- NGLVieweR_example() See example "updateColor".

Other updates: updateRepresentation(), updateStage(), updateVisibility()

Examples

```
## Not run:
NGLVieweR_proxy("structure") %>%
     updateColor("cartoon", "red")

## End(Not run)

if (interactive()) {
  library(shiny)

  ui <- fluidPage(
    titlePanel("Viewer with API inputs"),
    sidebarLayout(
      sidebarPanel(
        colourInput("color", "red", "red"),
        actionButton("update", "Update"),
      ),
      mainPanel(
        NGLVieweROutput("structure")
      )
    )
  )
  server <- function(input, output) {
    output$structure <- renderNGLVieweR({
      NGLVieweR("7CID") %>%
        addRepresentation("cartoon",
          param = list(name = "cartoon", color = "residueindex")
        )
    })
    observeEvent(input$update, {
      NGLVieweR_proxy("structure") %>%
        updateColor("cartoon", isolate(input$color))
    })
  }
  shinyApp(ui, server)
}
```

updateFocus *Update Focus*

Description

Update the focus of an existing NGLVieweR object in Shinymode.

Usage

```
updateFocus(NGLVieweR_proxy, focus = 0)
```

Arguments

NGLVieweR_proxy	A NGLVieweR object.
focus	Numeric value between 0-100 (default = 0).

Value

API call containing NGLVieweR id and list of message parameters.

See Also

- setFocus()
- NGLVieweR_example() See example "updateFocus".

Other options: setFocus(), setQuality(), snapShot(), updateFullscreen()

Examples

```
## Not run:
NGLVieweR_proxy("structure") %>%
  updateFocus(focus = 50)

## End(Not run)

if (interactive()) {
  library(shiny)
  ui = fluidPage(
    titlePanel("Viewer with API inputs"),
    sidebarLayout(
      sidebarPanel(
        sliderInput("focus", "Focus", 0, 100, 50)
      ),
      mainPanel(
        NGLVieweROutput("structure")
      )
    )
  )
```

```
  server = function(input, output) {
    output$structure <- renderNGLVieweR({
      NGLVieweR("7CID") %>%
        addRepresentation("cartoon",
        param = list(name = "cartoon", color= "red"))
    })
    observeEvent(input$focus, {
      NGLVieweR_proxy("structure") %>%
        updateFocus(input$focus)
    })
  }
shinyApp(ui, server)
}
```

`updateFullscreen` *Fullscreen*

Description

Put viewer in fullscreen. Works in Shinymode.

Usage

```
updateFullscreen(NGLVieweR_proxy, fullscreen = TRUE)
```

Arguments

`NGLVieweR_proxy`	A NGLVieweR object.
`fullscreen`	If `TRUE` put viewer in fullscreen.

Value

API call containing `NGLVieweR id` and list of message parameters.

See Also

`NGLVieweR_example()` See example "updateFullscreen".

Other options: `setFocus()`, `setQuality()`, `snapShot()`, `updateFocus()`

Examples

```
## Not run:
NGLVieweR_proxy("structure") %>% updateFullscreen()

## End(Not run)

if (interactive()) {
library(shiny)
```

```
ui <- fluidPage(
  titlePanel("Viewer with API inputs"),
  sidebarLayout(
    sidebarPanel(
      actionButton("fullscreen", "Fullscreen"),
    ),
    mainPanel(
      NGLVieweROutput("structure")
    )
  )
)
server = function(input, output) {
 output$structure <- renderNGLVieweR({
  NGLVieweR("7CID") %>%
    addRepresentation("cartoon",
      param = list(name = "cartoon", color = "red")
    )
})

  observeEvent(input$fullscreen, {
  NGLVieweR_proxy("structure") %>%
    updateFullscreen()
})
}
  shinyApp(ui, server)
}
```

`updateRepresentation` *Update Representation*

Description

Update an existing NGLVieweR representation in Shinymode.

Usage

```
updateRepresentation(NGLVieweR_proxy, name, param = list())
```

Arguments

`NGLVieweR_proxy`	A NGLVieweR object.
`name`	Name of representation to alter the color.
`param`	Options for the different types of representations. Most common options are `name`, `opacity`, `colorScheme`, `colorValue` and `visibility`. For a full list of options, see the general "RepresentationParameters" method and type specific Label-, Structure- and Surface- RepresentationParameters in the official NGL.js manual.

Value

API call containing `NGLVieweR` `id` and list of message parameters.

See Also

- `addSelection()` Add a new selection to a NGLVieweR object.
- `addRepresentation()`
- `NGLVieweR_example()` See example "updateRepresentation".

Other updates: `updateColor()`, `updateStage()`, `updateVisibility()`

Examples

```
## Not run:
NGLVieweR_proxy("structure") %>%
  updateRepresentation("cartoon",
    param = list(
      name = "cartoon",
      color = isolate(input$color),
      opacity = isolate(input$opacity)
    )
  )

## End(Not run)

if (interactive()) {
library(shiny)

ui = fluidPage(
  titlePanel("Viewer with API inputs"),
  sidebarLayout(
    sidebarPanel(
      selectInput("color", "Color", c("red", "white", "blue")),
      sliderInput("opacity", "Opacity", 0, 1, 1),
      actionButton("update", "Update"),
    ),
    mainPanel(
      NGLVieweROutput("structure")
    )
  )
)
server = function(input, output) {
  output$structure <- renderNGLVieweR({
    NGLVieweR("7CID") %>%
      addRepresentation("cartoon",
                        param = list(name = "cartoon", color="red"))
  })
observeEvent(input$update, {
  NGLVieweR_proxy("structure") %>%
    updateRepresentation("cartoon",
      param = list(
        color = isolate(input$color),
```

```
        opacity = isolate(input$opacity)
      )
    )
})
 }
shinyApp(ui, server)
}
```

---

updateRock *Update Rock*

Description

Start rock animation and stop spinning. Works on an existing NGLVieweR object in Shinymode.

Usage

```
updateRock(NGLVieweR_proxy, rock = TRUE)
```

Arguments

NGLVieweR_proxy	A NGLVieweR object.
rock	If TRUE (default), start rocking and stop spinning.

Value

API call containing NGLVieweR id and list of message parameters.

See Also

- setRock()
- NGLVieweR_example() See example "updateAnimation".

Other animations: setRock(), setSpin(), updateSpin(), updateZoomMove(), zoomMove()

Examples

```
## Not run:
NGLVieweR_proxy("structure") %>% updateRock(TRUE)

## End(Not run)

if (interactive()) {
library(shiny)

ui = fluidPage(
  titlePanel("Viewer with API inputs"),
  sidebarLayout(
```

```
    sidebarPanel(
      radioButtons("animate", label = "Animation",
      choices = c("None", "Spin", "Rock"), selected = "None")
    ),
    mainPanel(
      NGLVieweROutput("structure")
    )
  )
)
server = function(input, output) {
  output$structure <- renderNGLVieweR({
    NGLVieweR("7CID") %>%
      addRepresentation("cartoon",
      param = list(name = "cartoon", color="red"))
  })

  observeEvent(input$animate,{
    if(input$animate == "Rock"){
      NGLVieweR_proxy("structure") %>%
      updateRock(TRUE)
    } else if(input$animate == "Spin") {
      NGLVieweR_proxy("structure") %>%
      updateSpin(TRUE)
    } else{
      NGLVieweR_proxy("structure") %>%
      updateRock(FALSE) %>%
      updateSpin(FALSE)
    }
  })
 }
shinyApp(ui, server)
}
```

`updateSelection` *Update a selection*

Description

Update the selected residues of an existing NGLVieweR selection in

Usage

```
updateSelection(NGLVieweR_proxy, name = name, sele = "none")
```

Arguments

`NGLVieweR_proxy`	A NGLVieweR object.
`name`	Name of selection.
`sele`	Selected atoms/residues. See the section "selection-language" in the official NGL.js manual.

Value

API call containing `NGLVieweR` `id` and list of message parameters.

See Also

- `NGLVieweR_example()` See example "updateSelection".

Other selections: `addSelection()`, `removeSelection()`

Examples

```
## Not run:
NGLVieweR_proxy("structure") %>%
  updateSelection("ball+stick", sele = "1-20")

## End(Not run)

if (interactive()) {
  library(shiny)
  ui <- fluidPage(
    titlePanel("Viewer with API inputs"),
    sidebarLayout(
      sidebarPanel(
        textInput("selection", "Selection", "1-20"),
        actionButton("update", "Update")
      ),
      mainPanel(
        NGLVieweROutput("structure")
      )
    )
  )
  server <- function(input, output) {
    output$structure <- renderNGLVieweR({
      NGLVieweR("7CID") %>%
        addRepresentation("cartoon",
          param = list(name = "cartoon", color = "red")
        ) %>%
        addRepresentation("ball+stick",
          param = list(
            name = "ball+stick",
            colorValue = "yellow",
            colorScheme = "element",
            sele = "1-20"
          )
        )
    })
    observeEvent(input$update, {
      NGLVieweR_proxy("structure") %>%
        updateSelection("ball+stick", sele = isolate(input$selection))
    })
  }
  shinyApp(ui, server)
}
```

updateSpin *Update Spin*

Description

Start spin animation and stop rocking. Works on an existing NGLVieweR object in Shinymode.

Usage

```
updateSpin(NGLVieweR_proxy, spin = TRUE)
```

Arguments

NGLVieweR_proxy	A NGLVieweR object.
spin	If TRUE (default), start spinning and stop rocking.

Value

API call containing NGLVieweR id and list of message parameters.

See Also

- setSpin()
- NGLVieweR_example() See example "updateAnimation".

Other animations: setRock(), setSpin(), updateRock(), updateZoomMove(), zoomMove()

Examples

```
## Not run:
NGLVieweR_proxy("structure") %>% updateRock(TRUE)

## End(Not run)
if (interactive()) {
library(shiny)

ui = fluidPage(
  titlePanel("Viewer with API inputs"),
  sidebarLayout(
    sidebarPanel(
      radioButtons("animate", label = "Animation",
                   choices = c("None", "Spin", "Rock"), selected = "None")
    ),
    mainPanel(
      NGLVieweROutput("structure")
    )
  )
)
```

```
server = function(input, output) {
  output$structure <- renderNGLVieweR({
    NGLVieweR("7CID") %>%
      addRepresentation("cartoon",
      param = list(name = "cartoon", color="red"))
  })

  observeEvent(input$animate,{
    if(input$animate == "Rock"){
      NGLVieweR_proxy("structure") %>%
       updateRock(TRUE)
    } else if(input$animate == "Spin") {
      NGLVieweR_proxy("structure") %>%
       updateSpin(TRUE)
    } else{
      NGLVieweR_proxy("structure") %>%
       updateRock(FALSE) %>%
       updateSpin(FALSE)
    }
  })
 }
shinyApp(ui, server)
}
```

`updateStage` *Update Stage*

Description

Update an existing NGLVieweR stage in Shinymode.

Usage

```
updateStage(NGLVieweR_proxy, param = list())
```

Arguments

`NGLVieweR_proxy`	A NGLVieweR object.
`param`	Of type list. Most common options are `backgroundColor`, `rotateSpeed`, `zoomSpeed`, `hoverTimeout` and `lightIntensity`. For a full list of options, see the "StageParameters" method in the official NGL.js manual.

Value

API call containing `NGLVieweR` `id` and list of message parameters.

See Also

- stageParameters()
- NGLVieweR_example() See example "updateStage".

Other updates: updateColor(), updateRepresentation(), updateVisibility()

Examples

```
## Not run:
NGLVieweR("7CID") %>%
 addRepresentation("cartoon",
                   param = list(name = "cartoon", color="red")) %>%
 stageParameters(backgroundColor = "black")

## End(Not run)

if (interactive()) {
library(shiny)

ui = fluidPage(
  titlePanel("Viewer with API inputs"),
  sidebarLayout(
    sidebarPanel(
      selectInput("background", "Background", c("black", "white", "blue")),
      actionButton("update", "Update"),
    ),
    mainPanel(
      NGLVieweROutput("structure")
    )
  )
)
server <- function(input, output) {
  output$structure <- renderNGLVieweR({
    NGLVieweR("7CID") %>%
      addRepresentation("cartoon",
        param = list(name = "cartoon", color = "red")
      ) %>%
      stageParameters(backgroundColor = "black")
  })
  observeEvent(input$update, {
    NGLVieweR_proxy("structure") %>%
      updateStage(
      param = list("backgroundColor" = isolate(input$background)))
  })
}
shinyApp(ui, server)
}
```

updateVisibility *Update visibility*

Description

Hide or show an existing NGLViewR selection in Shinymode.

Usage

```
updateVisibility(NGLViewR_proxy, name, value = FALSE)
```

Arguments

NGLViewR_proxy	A NGLViewR object.
name	Name of selection to alter the color.
value	Hide FALSE or show TRUE selection. For a full description see "setVisibility" in the official NGL.js manual.

Value

API call containing NGLViewR id and list of message parameters.

See Also

NGLViewR_example() See example "updateVisibility".

Other updates: updateColor(), updateRepresentation(), updateStage()

Examples

```
## Not run:
NGLViewR_proxy("structure") %>%
 updateVisibility("cartoon", value = TRUE)

## End(Not run)

if (interactive()) {
library(shiny)

ui = fluidPage(
  titlePanel("Viewer with API inputs"),
  sidebarLayout(
    sidebarPanel(
      actionButton("show", "Show"),
      actionButton("hide", "Hide"),
    ),
    mainPanel(
      NGLViewROutput("structure")
```

```
    )
  )
)
server = function(input, output) {
  output$structure <- renderNGLVieweR({
    NGLVieweR("7CID") %>%
      addRepresentation("cartoon",
                        param = list(name = "cartoon", color="residueindex"))
  })
  observeEvent(input$show, {
    NGLVieweR_proxy("structure") %>%
      updateVisibility("cartoon", value = TRUE)

  })
  observeEvent(input$hide, {
    NGLVieweR_proxy("structure") %>%
      updateVisibility("cartoon", value = FALSE)

  })
}
shinyApp(ui, server)
}
```

`updateZoomMove` *Update zoomMove*

Description

Add a zoom animation on an existing NGLVieweR object.

Usage

```
updateZoomMove(NGLVieweR_proxy, center, zoom, duration = 0, z_offSet = 0)
```

Arguments

`NGLVieweR_proxy`	A NGLVieweR object.
`center`	Target distance of selected atoms/residues. See the section "selection-language" in the official NGL.js manual.
`zoom`	Target zoom of selected atoms/residues. See the section "selection-language" in the official NGL.js manual.
`duration`	Optional animation time in milliseconds (default = 0).
`z_offSet`	Optional zoom offset value (default = 0).

Value

API call containing `NGLVieweR` `id` and list of message parameters.

See Also

- zoomMove()
- NGLVieweR_example() See example "updatezoomMove".

Other animations: setRock(), setSpin(), updateRock(), updateSpin(), zoomMove()

Examples

```
## Not run:
NGLVieweR_proxy("structure") %>% updateZoomMove(center = "200",
                                                zoom = "200",
                                                z_offSet = 80,
                                                duration = 2000)

## End(Not run)

if (interactive()) {
library(shiny)

ui = fluidPage(
  titlePanel("Viewer with API inputs"),
  sidebarLayout(
    sidebarPanel(
      textInput("center", "Center", "200"),
      textInput("zoom", "Zoom", "200"),
      numericInput("zoomOffset", "Zoom offset", 80,0,100),
      numericInput("duration", "Duration", 2000,0,2000),
      actionButton("zoom", "Zoom"),
      actionButton("reset", "Reset")
    ),
    mainPanel(
      NGLVieweROutput("structure")
    )
  )
)
server = function(input, output) {
  output$structure <- renderNGLVieweR({
    NGLVieweR("7CID") %>%
      addRepresentation("cartoon",
      param = list(name = "cartoon", color="red")) %>%
      addRepresentation("ball+stick",
      param = list(name = "ball+stick", sele="200"))
  })

observeEvent(input$zoom, {
  NGLVieweR_proxy("structure") %>%
    updateZoomMove(
      center = isolate(input$center),
      zoom = isolate(input$zoom),
      z_offSet = isolate(input$zoomOffset),
      duration = isolate(input$duration)
    )
```

```
})

observeEvent(input$reset, {
  NGLVieweR_proxy("structure") %>%
    updateZoomMove(
      center = "*",
      zoom = "*",
      z_offSet = 0,
      duration = 1000
    )
})
}
shinyApp(ui, server)
}
```

`zoomMove` *Set zoomMove*

Description

Add a zoom animation

Usage

```
zoomMove(NGLVieweR, center, zoom, duration = 0, z_offSet = 0)
```

Arguments

`NGLVieweR`	A NGLVieweR object.
`center`	Target distance of selected atoms/residues. See the section "selection-language" in the official NGL.js manual.
`zoom`	Target zoom of selected atoms/residues. See the section "selection-language" in the official NGL.js manual.
`duration`	Optional animation time in milliseconds (default = 0).
`z_offSet`	Optional zoom offset value (default = 0).

Value

List of zoomMove parameters to `NGLVieweR` `htmlwidgets` object.

See Also

Other animations: `setRock()`, `setSpin()`, `updateRock()`, `updateSpin()`, `updateZoomMove()`

Examples

```
NGLVieweR("7CID") %>%
stageParameters(backgroundColor = "white") %>%
 addRepresentation("cartoon", param=list(name="cartoon", colorValue="red")) %>%
 addRepresentation("ball+stick", param=list(name="ball+stick",
                                            colorValue="yellow",
                                            colorScheme="element",
                                            sele="200")) %>%
 zoomMove("200:A.C", "200:A.C", 2000, -20)
```
